Andrius Adomaitis

Junior software developer

Hi I'm Andrius, in 2022 I decided to change career path and turn to software development. In July I decided to quit my job as production manager and started to study on my own. Started from the very basics of HTML and CSS and spent month and a half. Later I chose 4 months long Java Basiscs and Advanced studies on CodeAcademy. First two months was for the Java basics, and another two months was for Spring Boot framework and additional programs such as MySQL, Postman, Git, GitHub, Boostrap. In December started learning basics of JavaScript and React framework plus Node JS. With few colleagues started working on final practise assignment(simple accountant webpage for issuing invoices Spring + React + MySQL). Successfully finished and defended in the end of December, and few days later in the beginning of January, passed theory exam (mostly consisted of Spring framework). After graduation, continue learning of Spring and React, building my own portfolio. Looking for intern or junior software developer position in frontend, backend or fullstack, where I can continue learning, and adapting gained knowledge to practise.
